Question: Let X represent the difference between the number of heads and the number of tails obtained when a coin is tossed 6 times. What are possible values of X?

Solution:

Let H be a random variable which represents the number of Heads obtained in 6 coin tosses.

And T be a random variable which represents the number of Tails obtained in 6 coin tosses. Then,

 $H \in \{0,1,2,3,4,5,6\}$

Similarly,

 $T \in \{0, 1, 2, 3, 4, 5, 6\}$

$$H + T = 6 \tag{1}$$

$$X = |H - T| \tag{2}$$

$$X = |H - (6 - H)| \tag{3}$$

$$X = |2H - 6| \tag{4}$$

$$\Pr(X \le 0) = \Pr(|2H - 6| \le 0)$$
 (5)

$$= \Pr(2H - 6 = 0) = \Pr(H = 3) \quad (6)$$

$$=^{6} C_{3} \left(\frac{1}{2}\right)^{6} \tag{7}$$

$$\Pr(X \le 2) = \Pr(|2H - 6| \le 2)$$
 (8)

=
$$\Pr(2H - 6 \le 2)$$
 and $\Pr(2H - 6 \ge -2)$ (9)

$$= \Pr(H \le 4) \text{ and } \Pr(H \ge 2) \tag{10}$$

$$= \Pr\left(2 \le H \le 4\right) \tag{11}$$

$$= \sum_{i=2}^{4} \Pr(H = i)$$
 (12)

$$= {}^{6}C_{2} \left(\frac{1}{2}\right)^{6} + {}^{6}C_{3} \left(\frac{1}{2}\right)^{6} + {}^{6}C_{4} \left(\frac{1}{2}\right)^{6}$$
 (13)

$$=\frac{25}{32}$$
 (14)

$$Pr(X \le 4) = Pr(|2H - 6| \le 4)$$
 (15)

=
$$Pr(2H - 6 \le 4)$$
 and $Pr(2H - 6 \ge -4)$

(16)

$$= \Pr(H \le 5) \text{ and } \Pr(H \ge 1) \tag{17}$$

$$= \Pr\left(1 \le H \le 5\right) \tag{18}$$

$$= \sum_{i=1}^{5} \Pr(H = i)$$
 (19)

$$= {}^{6}C_{1}\left(\frac{1}{2}\right)^{6} + {}^{6}C_{2}\left(\frac{1}{2}\right)^{6} + {}^{6}C_{3}\left(\frac{1}{2}\right)^{6} \quad (20)$$

$$+^{6} C_{4} \left(\frac{1}{2}\right)^{6} +^{6} C_{5} \left(\frac{1}{2}\right)^{6}$$
 (21)

$$=\frac{31}{32}$$
 (22)

$$\Pr(X \le 6) = \Pr(|2H - 6| \le 6) \tag{23}$$

$$= \Pr(2H - 6 \le 6) \text{ and } \Pr(2H - 6 \ge -6)$$

$$= \Pr(H \le 6) \text{ and } \Pr(H \ge 0)$$
 (25)

$$= \Pr(H \le 6) \text{ and } \Pr(H \ge 0)$$
 (25)
= \Pr(0 \le H \le 6) (26)

$$= \Pr\left(0 \le H \le 0\right) \tag{26}$$

$$= \sum_{i=0}^{6} \Pr(H = i)$$
 (27)

$$= {}^{6}C_{0}\left(\frac{1}{2}\right)^{6} + {}^{6}C_{1}\left(\frac{1}{2}\right)^{6} + {}^{6}C_{2}\left(\frac{1}{2}\right)^{6} + {}^{6}C_{3}\left(\frac{1}{2}\right)^{6}$$

$$+^{6} C_{4} \left(\frac{1}{2}\right)^{6} +^{6} C_{5} \left(\frac{1}{2}\right)^{6} +^{6} C_{6} \left(\frac{1}{2}\right)^{6}$$
 (28)

$$=\frac{64}{64}=1$$
 (29)
